### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald Boys on 19 October 2004.

The application has been amended as follows:

Claim 1. A method of transferring data on a network, said network including a plurality of nodes connected by a plurality of links, at least one node being connected to more than one link over which the data can be transferred out of the at least one node, the method comprising: providing the data with an identifying portion which identifies a source node and a destination node for the data; associating the at least one node with a node identifying value to distinguish the at least one node from other nodes on the network; and using the identifying portion of the data and the node identifying value, ~~generating~~ calculating a link selection value which identifies one of the more than one links connected to the at least one node to transfer the data out of the at least one node, wherein the link selection value is calculated by combining the identifying portion of the data and the node identifying value through a logical operation.

Claim 7. The method of claim 4 wherein the identifying portion of the data includes a protocol ~~portion~~ field of the header.

Art Unit: 2665

Claim 9. (canceled).

Claim 10. The method of claim [9] 1 wherein the logical operation comprises a hash operation.

Claim 13. The method of claim 10 wherein the identifying portion of the data includes a protocol ~~portion~~ field of the header.

Claim 15. An apparatus for transferring data on a network, said network including a plurality of nodes connected by a plurality of links, at least one node being connected to a plurality of links over which the data can be transferred out of the at least one node, the data being provided with an identifying portion which identifies a source node and a destination node for the data, and the at least one node being associated with a node identifying value to distinguish the at least one node from other nodes on the network, the apparatus comprising: an output interface over which the data can be forwarded to one of the plurality of links; and a processing device for ~~generating~~ calculating a link selection value using the identifying portion of the data and the node identifying value, said ~~node~~ link selection value identifying one of the plurality of links connected to the at least one node to transfer the data out of the at least one node, wherein the link selection value is calculated by combining the identifying portion of the data and the node identifying value through a logical operation.

Art Unit: 2665

Claim 21. The apparatus of claim 18 wherein the identifying portion of the data used by the processing device to generate the link selection value includes a protocol-~~portion~~ field of the header.

Claim 23. (canceled).

Claim 24. The apparatus of claim [23] 15 wherein the logical operation performed by the processing device includes a hash operation.

Claim 27. The apparatus of claim 24 wherein the identifying portion of the data used by the processing device to generate the link selection value includes a protocol-~~portion~~ field of the header.

2. The following is an examiner's statement of reasons for allowance: the prior art does not disclose or fairly suggest using the node identifying value in addition to the identifying portion of the data in order to calculate a link selection value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
